## *specialist team assist seic*

In tandem with the current PMT support services provided to Sakhalin Energy Investment Company (SEIC) Lunskeye OPF, Kentz Russia has been asked to provide a specialist team of engineers and ex-inspectors for the commissioning of the SEIC offshore platform, LUN-A.

Located 15 km off the north-eastern coast of Sakhalin Island, LUN-A is a drilling and production platform with minimum processing facilities. LUN-A extracts oil condensate and gas which is then sent to the onshore Lunskeye OPF for separation and treatment before being piped to the LNG plant in the south

of the island for final processing and offloading.

The LUN-A platform is designed for year-round operation in harsh climatic conditions and is built to withstand rough seas, severe ice and high seismic activity.

Peter Ross, Kentz Russia Country Manager, noted "The fact that we have been asked to provide these offshore services is an acknowledgement of the quality work that Kentz has consistently produced for SEIC on Sakhalin. We look forward to developing our relationship with this valued client."

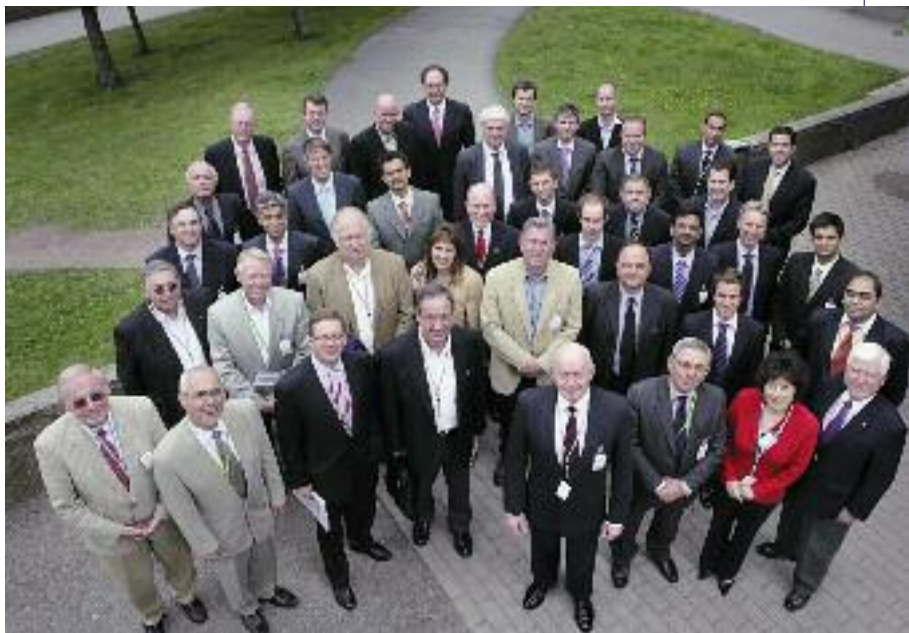

### GROUP

## *risky business*

In late 2007, Kentz was invited to join the Engineering and Construction Risk Institute organisation, a group which was formed as a result of an initiative of the World Economic Forum. The institute provides a forum for the professional exchange of ideas on a wide range of topics related to the management of risk in projects. Some of the member companies include AMEC, Bechtel, Fluor, Foster Wheeler, KBR, Petrofac, Parsons Brinkerhoff, Saipem, Shaw, SNC Lavalin, Tecnicas Reunidas and URS Washington Division.

At the sponsor meeting, hosted by Skanska in Stockholm during June 2008, Kentz marked its sponsorship of the ECRI with a presentation from Adrian Griffin, Group Commercial Manager. Adrian presented an introduction to the Kentz Group profile and capabilities, together with an overview of our Corporate Risk Management Procedures. The meeting was also attended by Keith Barry, Regional Business Development Manager for the Arctic & New Areas. The President of the ECRI, Roderick A. Kyle, said in his address that he was "delighted to welcome Kentz with its global presence to the ECRI and looked forward to Kentz's active participation in future events."

The Institute's objectives are to provide information and guidelines to the Engineering & Construction Industry to assist them to develop best practices for establishing, maintaining, and improving their Project Risk Management capabilities. The institute also engages in outreach to clients to identify and analyse total project risks and the allocation of these risks among client, contractor and others to deliver more effective solutions to meet industry needs.
